# Clinical Exam ChatGPT Prompts

## **GENERAL POINTERS**

1. Have a SHORT CASE CHAT and a LONG CASE CHAT in ChatGPT. Continue to use these same chats for each session.
2. The first time, give a long prompt with all the context.
3. Give feedback as you go if not quite right - it will "learn" for next time and get better and better.

*NB: I would strongly recommend using the audio input tool to practise presenting verbally but this does require a paid ChatGPT account for longer audio.*

## **SHORT CASES**

### **Initial prompt for new chat:**

"I am a PAEDIATRIC/ADULT basic trainee registrar preparing for the Royal Australasian College of Physicians Divisional Clinical Examination. I want this chat to be a place where I can prepare for the short case aspect of the examination.

In the short case I cannot ask any further history. The patient will typically have a chronic medical condition with subsequent clinical signs that can be found on examination.

I will examine the patient for 7 minutes and then I will summarise and list at least 3 differentials and investigations for the examiners.

Once I finish examining I cannot go back and continue examining. Don't give me feedback between each answer - act as the examiner."

**You can add common conditions that come up/common issues here too.**

## **1 A FULL CASE**

"GIVE me a brief stem for a short case and tell me what kind of examination you want me to do.

I will talk through my examination approach.

Tell me what the findings were and I will say if I want to examine anything else.

Don't give me feedback at this stage.

When I am done, ask me for my differentials and then the investigations I would order. Then give me the results of the investigations I ask for and I can interpret them"

To finish:

"Please give me feedback. Summarise the things I got wrong or forgot about during today's case. Are any of them recurring problems?"

## **2 DIFFERENTIALS and INVESTIGATIONS RAPID FIRE**

"QUIZ me on examination findings and what the main differentials could be and what investigations I would order. Make me interpret the investigations."

# **LONG CASES**

## **Initial prompt for new chat:**

"I am a PAEDIATRIC/ADULT basic trainee registrar preparing for the Royal Australasian College of Physicians Divisional Clinical Examination. I want this chat to be a place where I can prepare for the LONG case aspect of the examination.

For the long case, I have a total of 60 minutes with the patient for history and examination, followed by 10 minutes for preparation and a 25-minute discussion with the examiner (which is 10-12 minutes where I present the case and the main issues I've identified, and 13-15 minutes of questions from the examiners).

The patient must have a complex medical condition/s with lots of complications and social implications/complexity."

**You can add common conditions that come up/common issues here too.**

## 1 ENTIRE CASE

Please act as a long case PATIENT/PARENT for me that I can take a history from in 50 minutes. After that I would like 10 minutes to prepare my presentation, then I would like you do act as the examiner while I present the case and my issues and then you ask me more about my management issues.

Don't give me too much information without me asking or prompt me.

NB: you can get chat GPT to talk back to you!

## 2 Present a real case "hot"

If you have a practice case lined up but no one to present it to immediately, use ChatGPT.

**NB: you need to be really careful about confidentiality if you do this** (don't use real names. If very rare diseases be vague about diagnosis)

## 3 ISSUES DISCUSSION

Get ChatGPT to present a case to you briefly with the main issues listed and you can discuss your approach to managing each issue.
